Ecofan® Operating Instructions

The Ecofan is designed to be used on freestanding wood stoves with normal surface temperatures of 150°F - 650°F (65°C- 345°C). Temperatures above 650°F (345°C) may damage your Ecofan. Relocate your Ecofan to a cooler spot on your stove if the surface temperature exceeds 650°F (345°C). Good wood stove safety practice includes using a stove thermometer.

Safety

- Ensure the Ecofan handle is upright before placing on stove.
- While in use, the base of the Ecofan is very hot. **DO NOT TOUCH!** When repositioning your Ecofan always do so by the handle.

Getting the Most From Your Ecofan®

For optimum performance, placement on the stove's surface is critical. Be sure to position the Ecofan on the stove top so that cool air will be drawn over the cooling fins. The Ecofan should not be used directly in front of the stove pipe or at the front of the stove.

NOTE: Overheating will reduce the Ecofan's effectiveness and may damage the thermoelectric module and void the warranty. Remove the Ecofan from stove if temperature exceeds 650°F (345°C).

Motor Replacement Kits

Part # MRK-3

The Ecofan motor is designed for several seasons of use under normal operating conditions. If your fan spins much slower or the blade requires a push to start, a simple *motor replacement* may be the solution.
